Humanoid robotics for the services sector

BREO Services is a 1.70 m humanoid platform under development, aimed at organisations exploring new ways of incorporating robotics and artificial intelligence. Its approach covers different environments in the services sector.

1.70 m TALL · TWO ARMS · VDA 5050 INTEGRATION

01 Tourism and hospitality

Hotels, tourist establishments and hospitality spaces. An area of development for the presence of humanoid robotics in people-centred environments.

02 Retail and public spaces

Shops, cultural venues and spaces open to the public. A platform designed to explore new forms of interaction between people and robots.

03 Corporate and institutional environments

Companies, institutions and service organisations. A proposal open to different configurations and to the evolving needs of each sector.

A common technology base

Humanoid design

A two-arm platform designed to expand the possibilities of interacting with the environment.

Perception and artificial intelligence

An architecture under development that connects perception, interaction and control in a single system.
